

The BULL™: BEST mobile litter fence

New
Canopy
Design

Our 15ft high BULL with Canopy™ and Side-nets™ captures and holds litter better. Our standard outriggers, shown here deployed at the 1st setting, provide maximum stability.

THE BULL: Blowing Litter's Worst Enemy

- Designed to withstand winds over 65mph—outriggers, standard on the BULL, can be deployed to provide maximum overturning resistance.
- The BULL Canopy™ and Side-nets™ keep litter from escaping—no litter slipping off the edges between adjacent units. They also catch their share of litter in shifting winds.
- Fully adjustable hooks—operators can easily pick up and move the Bull using a wide selection of equipment.
- Strong steel back net—galvanized and vinyl coated.
- Wear-plates on front surfaces—provide additional stability and protection.
- Net supports with steel framing—easily take on harsh landfill conditions.

Five year warranty.

Move the BULL everyday in rough landfill conditions without damage. The BULL is designed and built to be strong.

Lower your operating costs.

Reduce manual labor picking up litter.

Increase your profit.

Stay open on windy days when you would normally close.

Keep your regulators and neighbors satisfied and avoid fines.

Stop your blowing litter at the working face.
